- USB Standard-A
- USB Micro-B
- USB Standard-B
- USB Type-C

USB Standard-A to:

- USB Micro-B
- USB Standard-B
- USB Type-C

USB Standard-B to:

- USB Standard-A
- USB Type-C

Video:

- HDMI to HDMI
- DisplayPort to DisplayPort

WHY TEST CABLES?

Data cables manufactured today carry exponentially more power and increased functionality versus those created in the past. With additional complexity the likelihood of failure increases; with the increase of available power, the potential damage from bad cables is costly. The oversupply of high power, existence of complicated circuitry, problems with interoperability, and signal integrity issues are all factors that increase the complexity of manufacturing high quality cables today.

"The Total Phase Advanced Cable Tester is an all-in-one solution for rapidly ensuring your cables meet design specifications. This tool is intended for factory production testing and may additionally be used for pre-scan testing." — USB 3.2 Test Tools, USB-IF

Problems

You make high quality products that connect to other devices. Interconnecting cables are required. Maybe you bundle a cable with your product. What happens if the cable doesn't perform as expected?

- Devices don't work
- Damage to devices
- Potential cable/device fire
- Shock/electrocute children
- Slow data transfer
- Devices fail to connect to hosts
- Poor video quality, screens with snow, stars, artifacts or no picture
- Customers can't download content (images/data)
- Music doesn't stream

Solutions

- 100% Individual Quality Control
- Detect shorts
- Detect opens
- Verify routing
- Identify protocol errors
- Verify resistors
- Measure DC resistance for power and ground
- Measure DC resistance for digital lines
- Measure signal integrity on data lines up to 12.8 Gbps
- Validate consistency between E-Markers and cable capabilities (USB Type-C only)
- Final test data – results archive

Impact

- More support calls
- More returned product
- Poor quality reputation
- Damage to your brand
- High cost/lost profit
- Higher quality, less support needed
- Higher quality, fewer returns
- High quality reputation
- High quality is cost effective

Eye Diagrams to verify signal integrity at speeds from 520 kbps to 12.8 Gbps

Passing eye-diagram 10 Gbps USB Type-C to USB Type-C cable.

Failing eye-diagram USB2 data line for USB Standard-A to USB Standard-B cable.

- High Volume
- Industrial Design
- Test Result Database
- Thorough Test Coverage
- Statistical/Individual Quality Control

Video/USB Tests

- Accurate/Precise DCR measurement
- Ra/Rp/Rd measurement
- USB PD 2.0/PD 3.0 compatible
- E-Marker verification for USB
- SuperSpeed signal integrity testing

Design Certification is only part of the solution

- ▶ The major protocol governing bodies such as USB-IF, HDMI.org, and VESA have established very strict standards to certify cable designs. Cable design certification only requires that the manufacture and test of a limited representative sample conforms to the industry design specification.
- ▶ The challenge with industry design certification is the impossibility of ensuring that well designed cables are always well manufactured. Ensuring good designs are properly manufactured is the scope of manufacturing quality control. There are two types of manufacturing quality control: IQC (100% individual quality control) or SPC (statistical process control).
- ▶ Both methods are excellent; however, more complex designs are heavily impacted by subtle changes in the manufacturing process that can occur over a single shift. Without 100% full manufacturing automation, inconsistencies may significantly impact product quality.
- ▶ The Advanced Cable Tester v2 was designed to enable cost effective, full coverage, high speed cable testing at the end of the manufacturing line. Guarantee your cables are manufactured exactly as specified.

Advanced Cable Tester v2

Specifications

Application Features

- Web Interface
- Fast Testing
- Auto-start on cable insertion
- Tabular data and eye diagrams
- Instant results
- Headless Mode
- Connect via USB or Ethernet

Data Management

- Local storage of > 1,000,000 test results
- Pass/Fail indication on LCD screen
- Easy to read, printable reports
- Exportable test data

Hardware

- Industrial Design, Factory Ready
- LCD screen to present test results
- Audible alarm to indicate test results

Cable Test Protocols Supported

- USB 2.0/3.0/3.1/3.2
- USB PD 2.0/PD 3.0
- DP 1.1/1.2/1.3/1.4/2.0 (Up to UHBR10 speeds)
- HDMI (Up to 12.8 Gbps per channel)

Operating Systems Supported

All

Browsers Supported

- Chrome (preferred)
- Firefox

Input Power Requirements

- Input Power: 110V/220V
- Current Draw (max): 3A/1.5A

Dimensions

- ACT v2: 12 x 10.8 x 4 inches (30.5 x 27.3 x 10.2 cm)
- Power Supply: 4.5 x 2 x 1.25 inches (11.4 x 5.1 x 3.2 cm)

(excluding line cord)

Weight

- ACT v2 including 1 connector module: 7.9 lbs (3.6 kg)
- Power Supply including line cord: 0.5 lbs (0.23 kg)

Operating Temperature

- 10°C – 35°C (50°F – 95°F)

Quality Manufacturing

- ISO 9001:2018
- ISO 13485:2016
- ITAR
- AS9100D

Advanced Cable Tester v2 Package Includes

Advanced Cable Tester v2 Hardware

- 110V/220V Power Supply
- Line Cord with your choice of Type B/F/G adapters
- 1 x 6 foot USB 2.0 Standard-A to USB Micro-B cable
- 1 x 2 meter Ethernet cable
- Comprehensive 1 year warranty included
- Optional extended support available

Your choice of a connector module bundle:

USB Type-C

- 1 x USB Type-C to USB Type-C
- 1 x USB Type-C to USB Standard-A
- 1 x USB Type-C to USB Micro-B
- 1 x USB Type C to USB Standard-B

Video

- 2 x HDMI to HDMI
- 2 x DisplayPort to DisplayPort
